

Frosted Dome Mounting Installations

1

In order to meet the energy star performance criteria or the .30/.30 tax credit the frosted dome must be mounted with the rounded frosted area facing down the roof.

**2**

If you desire more light, rotate the dome so the frosted section is facing up the roof or away from the path of the sun.

**3**

The corresponding pre-drilled screw holes in the dome and the black intermediate ring may not always line up. So to secure the dome firmly press and seat the dome into position. When pressing down install the self drilling screws. DO NOT attempt to drill through the dome.
